# MONITORING OF BUSINESSES

No. 11 • November 2023

(survey period: 1 to 14 November)

Information and analytical commentary

21 November 2023

## What is monitoring of businesses?

The Bank of Russia, just as many foreign central banks, regularly surveys non-financial enterprises (monitoring of businesses).

The Monitoring of Businesses project of the Bank of Russia has marked the 25th anniversary in 2023. Over the years of long-term co-operation with enterprises, we have prepared the most representative sample in Russia. On average, more than 14,000 enterprises of key types of economic activity took part in the surveys every month in 2022. Every sixth enterprise has been participating in the process of monitoring for over 20 years.

## How do we collect data?

In the course of the surveys, company management makes a qualitative estimate of current and expected changes in business activity based on the dynamics of production output, demand, prices, and other indicators.

The value of the survey data obtained by the Bank of Russia mainly depends on how promptly these data are gathered (information is collected within 7–10 business days). This makes it possible to calculate analytical indicators on the main economic trends before official statistics are published.

In addition to assessments of the current situation, the Bank of Russia also continuously monitors the near-term expectations of businesses. The inclusion of expectations in the calculation of analytical indicators determines their forward-looking nature and gives a significant advantage over many similar surveys of businesses.

## Where are the data used?

The Bank of Russia takes the collected data into consideration when making decisions on monetary policy to analyse and forecast inflation, identify the key trends in economic development across Russia in general and in its regions.

Information based on the monitoring results is used for research and in analytical materials posted on the Bank of Russia website, in the Regional Economy Commentaries by the Bank of Russia Main Branches, which are published just before the quiet period prior to making a decision on the key rate, as well as during the Bank of Russia's communication events with the business community and government authorities.

**See details in the section Monetary Policy/Monitoring of Businesses on the Bank of Russia website.**

## MONITORING OF BUSINESSES: ASSESSMENTS, EXPECTATIONS AND COMMENTS (NOVEMBER 2023)

- The Business Climate Index (BCI)<sup>1</sup> of the Bank of Russia rose to 6.8 points in November (vs 6.3 points in October) due to improved expectations of companies. The current value of the BCI exceeded its 2023 Q3 average.
- Current estimates of demand decreased, whereas output estimates increased slightly. Companies improved their short-term expectations for output and demand.
- Following the upward movement observed over the four previous months, companies' price expectations declined in November. However, so far, they have been above the 2023 Q3 average levels and well above the 2017–2019 values, when inflation was close to the target level. Current estimates of cost dynamics also began to decline.
- According to companies' estimates, lending conditions tightened markedly in August–October compared to 2023 H1. In November, the tightening of lending conditions continued.

\* Averages for the year and quarters.

\*\* The indicated month is the month of the survey. Companies estimate present conditions a month earlier.

\*\*\* Seasonally adjusted.

Source: Bank of Russia.

<sup>1</sup> The Bank of Russia's Business Climate Index shows actual and expected changes in production and demand based on estimates made by the companies participating in the survey (seasonally adjusted, SA). Figures for previous periods are generated on the basis of comprehensive data, taking into account questionnaires received after the compilation of up-to-date information. The data for previous periods may be revised using the methodology of seasonal adjustment of indicators. Expectations are companies' estimates of the changes in indicators in the next three months.

KEY INDICATORS OF MONITORING OF BUSINESSES IN PERCENTILES RELATIVE TO THE DISTRIBUTION OF VALUES FROM 2017\* (%)

Chart 1

\* The chart shows percentiles for the current and previous months in the distribution observed from January 2017 to November 2023. The round red marker shows the level of the indicator (in percentiles) for the previous reporting period, and the blue marker shows the level of the indicator (in percentiles) for the current reporting period. A shift of the indicator to the left relative to the previous date means lower values of the indicator, to the right – higher values.

## BANK OF RUSSIA'S BUSINESS CLIMATE INDEX

BANK OF RUSSIA'S BUSINESS CLIMATE INDEX  
(POINTS, SA)

Chart 2

Source: Bank of Russia.

In November, the **BCI** increased to 6.8 points from 6.3 points in October, posting growth for the third month in a row (Chart 2). As in October, the increase in the BCI was largely driven by the improvement in companies' expectations.

**Estimates of current economic conditions** were declining for the second consecutive month both in the economy as a whole and across all main industries. The most noticeable decrease was observed in mining and quarrying and construction.

**Companies' expectations** continued to improve across the majority of economic activities, except for industrial production (including mining and quarrying) and trade in motor vehicles.

## OUTPUT

ESTIMATES OF CHANGES IN PRODUCTION OUTPUT, CONTRACTED WORKS, TURNOVER, AND SERVICES (BALANCE OF RESPONSES, POINTS, SA) *Chart 3*

Source: Bank of Russia.

CURRENT ESTIMATES OF CHANGES IN PRODUCTION OUTPUT BY ECONOMIC ACTIVITY IN PERCENTILES RELATIVE TO THE DISTRIBUTION OF VALUES FROM 2017 *Chart 4*

Note. See footnote to Chart 1.

Source: Bank of Russia.

November statistics point to a slight increase in **current estimates of output** (Charts 3 and 4). The most positive estimates were recorded in agriculture and electric power industry. As for manufacturing, such estimates were posted by producers of investment goods. Staff shortages (of both highly skilled professionals and low skilled workers) were still noted by many companies among factors limiting growth in output.

**Companies' expectations** exceeded the October level in most industries. The most considerable improvement was observed in the retail and services sectors. Expectations of mining and quarrying companies, as well as motor vehicle traders were more restrained.

## DEMAND FOR PRODUCTS

ESTIMATES OF CHANGES IN DEMAND FOR PRODUCTS *Chart 5*  
(BALANCE OF RESPONSES, POINTS, SA)

Source: Bank of Russia.

CURRENT ESTIMATES OF CHANGES IN DEMAND FOR PRODUCTS BY ECONOMIC ACTIVITY IN PERCENTILES  
RELATIVE TO THE DISTRIBUTION OF VALUES FROM 2017 *Chart 6*

Note. See footnote to Chart 1.

Source: Bank of Russia.

In November, **current estimates of demand** declined for the second month in a row (Chart 5). The overall balance of responses was around zero, corresponding to the 2021 H2 values. The most noticeable drop was observed in mining and quarrying and construction.

**Companies' expectations for demand** were up and stayed close to ten-year highs. Expectations improved almost in all industries. However, in the trade in motor vehicles, they slightly decreased after a considerable surge in October amid elevated consumer expectations for rises in car prices.

## PRICES FOR COMPANIES' PRODUCTS (SERVICES)

ESTIMATES OF CHANGES IN PRICES FOR COMPANIES' PRODUCTS (SERVICES) AND PRODUCTION (MARKETING) COSTS (BALANCE OF RESPONSES, POINTS, SA) *Chart 7*

Source: Bank of Russia.

EXPECTATIONS FOR CHANGES IN PRICES FOR COMPANIES' PRODUCTS IN THE NEXT THREE MONTHS (BALANCE OF RESPONSES, POINTS, SA) *Chart 8*

Sources: Bank of Russia, Rosstat.

In November, respondents in the majority of industries reported increases in **current output prices for their products (services)** less frequently than a month earlier. The highest balance of estimates was still observed in trade (especially, in retail), despite a meaningful drop compared with October.

**Price expectations of companies** in the economy as a whole, decreased in November after their growth over the four previous months (Chart 8). However, so far, they have been above the 2023 Q3 average levels and well above the 2017–2019 values, when inflation was close to the target level. Price expectations declined in most industries. However, they rose in mining and quarrying, agriculture and water supply sectors (Chart 9).

In November, growth in **companies' costs** slowed down in all economic activities, except for the electric power industry (Chart 7). This was due to a stronger ruble, among other things. However, in general, companies' estimates remained close to this year's local highs. Speaking about cost growth factors, respondents noted increases in prices for lubricants, components, materials, and freight transportation due to higher carriers' tariffs and wages offered by companies to attract and retain employees amid staff shortages.

EXPECTATIONS FOR CHANGES IN PRICES FOR COMPANIES' PRODUCTS IN THE NEXT THREE MONTHS BY ECONOMIC ACTIVITY IN PERCENTILES RELATIVE TO THE DISTRIBUTION OF VALUES FROM 2017 Chart 9

Note. See footnote to Chart 1.  
Source: Bank of Russia.

## LENDING CONDITIONS FOR BUSINESSES

ESTIMATES OF CHANGES IN LENDING CONDITIONS AND KEY RATE DYNAMICS *Chart 10*  
(BALANCE OF RESPONSES, POINTS)

Source: Bank of Russia.

ESTIMATES OF CHANGES IN LENDING CONDITIONS BY ECONOMIC ACTIVITY IN PERCENTILES RELATIVE TO THE DISTRIBUTION OF VALUES FROM 2017 *Chart 11*

\* The minimum value since 2017.

Note. See footnote to Chart 1.

Source: Bank of Russia.

According to estimates of companies from almost all industries (except for retail), **lending conditions** additionally tightened in November (Charts 10 and 11). This mainly resulted in higher nominal credit interest rates. Farming enterprises were least affected by the tightening of lending conditions. Nonetheless, credit activities of companies remained high, including in anticipation of future demand and state contracts.

BANK OF RUSSIA'S BCI (COMPOSITE) ACROSS RUSSIAN REGIONS  
(STANDARDISED ESTIMATE)

Note. The data are calculated excluding the Donetsk People's Republic (DPR), the Lugansk People's Republic (LPR), the Zaporozhye Region, and the Kherson Region.

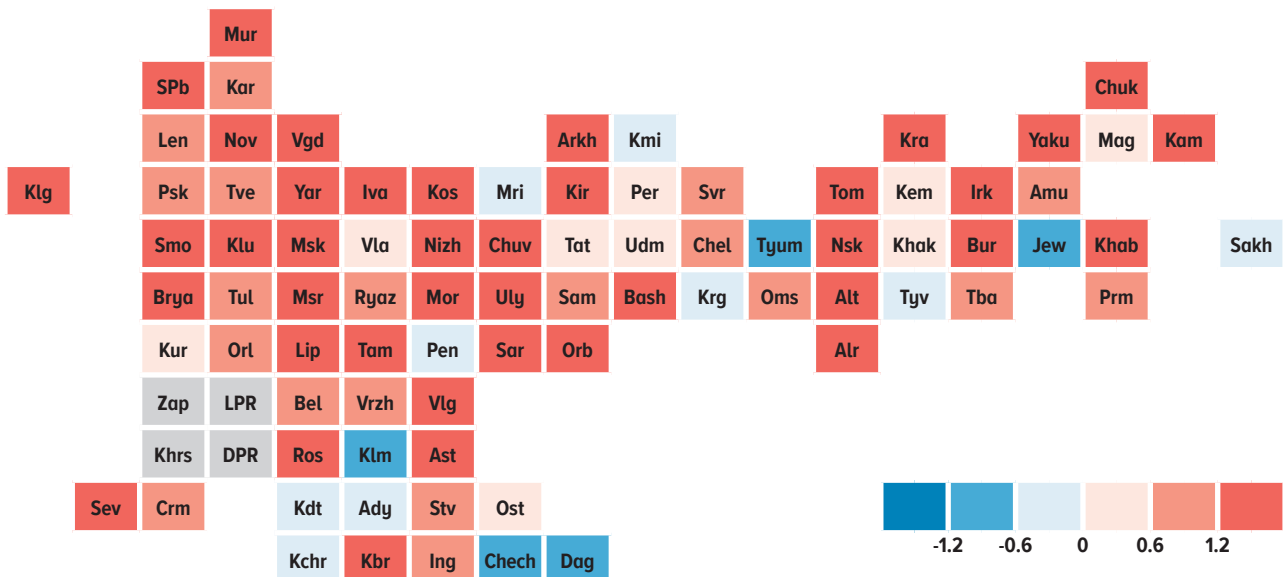

The present data are seasonally adjusted. Data on the regional business climate index are weighted from industries of a lower aggregation level based on the structure of gross value added by industry sectors.

The standardised estimate (z-estimate) shows the difference between the current value of the indicator for the region and its long-term average calculated since 2013 (number of standard deviations). A positive value of the standardised estimate means that the indicator exceeds the long-term average, a zero or close-to-zero value means that it is close to the average, and a negative value means that it is below the long-term average for a given region.

Maximum value (across industry)

Minimum value (across industry)

\* The indicated month is the month of the survey. Companies estimate present conditions a month earlier. Green shading means the most positive estimate across the industry over 14 months, blue shading means the most negative one. For reference: the Bank of Russia's Business Climate Index is calculated monthly based on the balances of responses to four questions of the market questionnaire for estimating changes in production output, changes in demand for companies' products, changes in production output in the next three months, and changes in demand for products in the next three months. See details on the [calculation methodology](#) on the Bank of Russia website. Source: Bank of Russia.
