PREFACE

One of the functions of the Bank of Russia, stipulated by the Federal Law on the Central Bank of the Russian Federation (Bank of Russia), is to publish statistical information about the banking system of the Russian Federation. The Bulletin of Banking Statistics, hereinafter referred to as the Bulletin, is a monthly newsletter of the Bank of Russia, reporting and analysing monetary conditions, interest rate levels and dynamics in the various sectors of the financial market and the activities of credit institutions and the Bank of Russia and also providing some official data of other economic agencies.

Realising the importance of the transparency of banking information as a mandatory rule of civilised society, the Bank of Russia constantly improves the contents of the Bulletin, trying at the same time to preserve continuity in arranging and presenting statistical material while meeting the rapidly growing demand for banking information.

Therefore, this Bulletin for 1998 has a number of features that make it different from the previous issues.

All information is grouped into four sections:

Section 1 Main Macroeconomic and Monetary Indicators;

Section 2 Main Indicators and Instruments of Bank of Russia's Monetary Policy;

Section 3 Financial Markets;

Section 4 Some Performance Indicators on Credit Institutions.

A large part of information is presented in the form of absolute (basic) indicators in order to enable users to create any additional sets of relative indicators, depending on the purposes of analysis.

All absolute figures in the Russian Federation currency for 1997 are given in redenominated rubles except where stated otherwise.

Some indicators are presented in the form of a consistent time series from 1997, calculated in the comparable 1998 methodology (that is why such data may differ from those published earlier).

The Bulletin comprises more diverse information, including some indicators on the external and financial sectors of the economy, which must be made available for users concerned in compliance with the requirements of the IMF Special Data Dissemination Standard (such indicators are marked with *). The Bulletin provides more data on the activities of credit institutions, which are complemented with aggregate data on assets and liabilities by lending and borrowing terms, comparative data on individual performance indicators for credit institutions, grouped by size of assets, and data on the structure of credit and investment portfolios of credit institutions and operations on the futures market.

Later this year the Bank will begin publishing a quarterly supplement to the Bulletin, containing banking statistics on Russian regions.

Changes in the structure of information published in the Bulletin were facilitated after the Russian banking system adopted on January 1, 1998, a new Chart of Accounts, which was devised taking into account the needs of users, the experience accumulated by the Russian banking system, and bank accounting practices in other countries.

Since any major change in reporting and accounting practices takes some time to ensure a high standard of information, the data published in this issue of the Bulletin for January 1998 are limited and may be subsequently corrected. Beginning with the fourth issue of the Bulletin, it is intended to publish the entire set of tables planned for 1998.

The Bank of Russia believes that interaction with users will help it improve the Bulletin and it will appreciate any comments and proposals on its structure and contents.

The Bulletin of banking statistics is also available on the web site of CBR (<http://www.cbr.ru>).

gold	4.0	4.1	4.2	4.4	4.9	4.9	4.8

¹ International reserves represent the amount of Bank of Russia and Finance Ministry reserve assets as of the reporting date. Bank of Russia and Finance Ministry reserve assets include monetary gold, special drawing rights, reserve position in the IMF and other liquid foreign exchange assets. The latter comprise balances in current accounts, short-term deposits in nonresident and resident banks, foreign government securities, REPO agreements with nonresidents on these securities, and other liquid assets. The interest accrued on these assets is not included. Monetary gold is valued at \$300 per troy ounce. Foreign exchange assets are converted into US dollars in accordance with the cross-rates of foreign currencies against the US dollar, which are calculated on the basis of the official rates of the ruble against these foreign currencies, set by the Bank of Russia and effective as of the reporting date.

¹ This table is based on data of the consolidated accounting balance sheet of credit institutions having Bank of Russia banking licenses and Vneshekonombank (except data on the latter's functions as the foreign debt servicing agent of the Russian government). After 1 January, 1998, the analytical group of accounts of credit institutions is based only on the balance sheets of operating credit institutions, except banks in liquidation. To make possible the analysis and comparison of data with earlier published data this issue of the Bulletin provides consistent time series of indicators from 1997, except for data on credit institutions whose licences have been revoked.

² Reserves of credit institutions include cash reserves in vaults of credit institutions and their funds in accounts with the Bank of Russia.

³ Except credit institutions.

¹ The Table "Monetary survey" is the result of consolidation of groups of items of the balance sheets of the Bank of Russia, Finance Ministry and credit institutions indicated in the Tables "Analytical groups of accounts of monetary authorities" and "Analytical groups of accounts of credit institutions" and it includes both accounts in Russian currency and accounts in foreign exchange.

² Internal credit is the banking system's net claims on the general government and also all claims on state and private enterprises and households.

³ The aggregate "Money" comprises the sum of currency outside banks and demand deposits inside the banking system (excluding deposits of all levels of government), that is, represents all monetary funds in the country's economy that can be used as a means of payment.

⁴ The aggregate "Quasi-money" represents the liquid banking deposits which are not directly used as a means of payment and normally have a slower velocity of circulation than "Money". "Quasi-money" includes time and savings deposits and foreign currency deposits. Combined, the aggregates "Money" and "Quasi-money" form the aggregate "Broad money". The value of this aggregate differs from the value of "Money supply" shown in Table 1.8, because in the monetary survey this aggregate includes foreign currency deposits.

¹ After 1 January, 1998, money supply does not include data on credit institutions which had their licences revoked. To facilitate the analysis and comparison of money supply data with earlier published data this issue of the Bulletin carries consistent time series of the corresponding indicators, calculated excluding data on credit institutions which had their licence revoked, as well as by using the previous method for as long as such information was available.

² The M2 aggregate of money supply is the amount of currency in circulation (outside the banks) and balances in national currency in settlement and current accounts and deposits of resident non-financial enterprises and organisations and private individuals. This aggregate does not include deposits in foreign currency.

¹ Required reserves are one of the main instruments used by the Bank of Russia in implementing its monetary policy and regulating general banking liquidity. Reserve requirements are set to limit the lending possibilities of credit institutions and maintain money supply at the required level. In accordance with Article 38 of the Federal Law on the Central Bank of the Russian Federation (Bank of Russia), the percent ratio of required reserves to a credit organisation's liabilities and the procedure for depositing reserves with the Bank of Russia are established by the Bank of Russia Board of Directors. Required reserves are set by the Bank of Russia Board of Directors, taking into account the terms and methods of borrowing funds by credit institutions from legal entities and natural persons in Russian currency and in foreign exchange.

² The ratio of reserve requirements for growth in demand deposits.

³ The ratio of reserve requirements for growth in time deposits.

⁴ After 1 December, 1996.

¹ The official midpoint ruble rate against the US dollar is the average between the buying and selling rates of the US dollar for Russian rubles on Bank of Russia operations in the interbank market (this definition has been used by the Bank of Russia since May 1996). This rate is set by the Bank of Russia for the calculation of federal budget revenues and expenditures, for use in all types of payment and settlement relations between the government and organisations and individuals and also for the purposes of taxation and accounting. The official ruble/dollar rate set by the Bank of Russia on Saturday is effective on Sunday and Monday.

² In prices prior to re-denomination of the ruble.

¹ Calculated as an average yield weighted by maturity for GKO or coupon payment period for OFZ and by trading volume.

² Market portfolio index is calculated as an average yield weighted by maturity for short-term (up to 90 days) and medium-term (from 91 days to 1 year) GKO issues.

³ Calculated as an average yield weighted by maturity for GKO or coupon payment period for OFZ and by secondary market turnovers.

⁴ Turnover ratio is calculated as the ratio of total turnover to the number of securities placed.

⁵ Calculated as an average maturity weighted by trading volume.
