Section 1. Main Macroeconomic and Monetary Indicators

Table 1.1
Balance of Payments of the Russian Federation

General Provisions

The balance of payments of the Russian Federation (hereafter referred to as the balance of payments) is a statistical statement, which reflects all economic transactions between Russian Federation residents and non-residents within a reporting period.

The table 'Balance of Payments of the Russian Federation' is compiled and published by the Bank of Russia quarterly.

Balance of payments data are used for elaborating the monetary policy of the state.

The balance of payments is compiled by the Bank of Russia based on its competence embedded in Federal Law No. 86-FZ, dated 10 July 2002, 'On the Central Bank of the Russian Federation (Bank of Russia)' (as amended), Federal Law No. 282-FZ, dated 29 November 2007, 'On Official Statistical Accounting and State Statistics System in the Russian Federation' (as amended), and provisions under Russian Federation Government Resolution No. 1226, dated 26 September 1997, 'On the Russian Federation's Adherence to the Special Data Dissemination Standard of the International Monetary Fund (IMF)', Russian Federation Government Resolution No. 849, dated 18 July 1994, 'On Procedure for Compiling and Submitting the Balance of Payments of the Russian Federation', and Russian Federation Government Directive No. 671-r, dated 6 May 2008, 'On Approving the Federal Plan of Statistical Activities'.

The methodological basis for the balance of payments is set out in the sixth edition of the IMF's *Balance of Payments and International Investment Position Manual (BPM6)*.

Sources of information are comprised of official statistics and administrative data on foreign economic transactions of Russian residents which are routinely received by the Bank of Russia from Russia's Ministry of Finance (Minfin of Russia), Federal Customs Service (FCS of Russia), Federal Service for State Statistics (Rosstat), Ministry of the Interior of the Russian Federation (MVD), Ministry of Civil Defence, Emergencies and Disaster Relief of the Russian Federation (MChS), Frontier Service of the Federal Security Service, Ministry of Energy (Minenergo), Ministry of Transport (Mintrans); reporting forms of credit institutions and other financial corporations; primary statistical data of non-financial corporations; Russia's trading partner country statistics; as well as the Bank of Russia's administrative data, own data and estimation system.

An exhaustive list of reporting forms used to compile the balance of payments and other information of reference are available on the Bank of Russia website in the section *Statistics. Macroeconomic Financial Statistics. External Sector Statistics*.

The table 'Balance of Payments of the Russian Federation' is the analytical presentation of the balance of payments, the template of which meets international standards and reflects the national-specific features of the formation of cross-border flows of goods, services and capital. The focus of this presentation is on the disclosure of capital flows by functional category. The presentation by functional category helps identify different economic behavior models of residents and non-residents and provide a statistical pattern of international economic interaction that is most relevant for the purposes of analysis and government regulation.

Balance of payments data for previous periods are revised mainly because of the updating of reports for previous periods, emergence of new information sources, methodological improvements and (or) changes in the methods of compilation of certain aggregates as well as reclassification of financial instruments (aggregates). Such an approach ensures access to the most updated data for all users of balance of payments statistics.

Balance of payments data in the analytical presentation are posted on the Bank of Russia website.

Individual Indicators Highlights

1. Current account represents a balance of transactions between Russian Federation residents and non-residents in goods and services, primary income (compensation of employees, investment income, and rent) and secondary income.

1.1. Goods and services. Recorded under this item is the net value of exports and imports of goods whose ownership rights were transferred within a reporting period from residents to non-residents (exports) and from non-residents to residents (imports), as well as the net value of services exports and imports which were provided by residents to non-residents (exports) and received by residents from non-residents (imports) within a reporting period.

The item 'Goods' aggregates are compiled using merchandise exports/imports transactions' data recorded by the FCS of Russia, as supplemented and adjusted, and used by the Bank of Russia in accordance with the aggregate compilation methodology.

1.2. Primary income represents a balance on compensation of employees (a balance on remuneration of resident workers that are temporarily employed in a foreign economy and earnings of non-residents working in the Russian Federation), investment income (a balance on income of Russian Federation residents earned on foreign financial assets owned by them (in the form of direct, portfolio and other investment) and similar income payable to non-residents resulting from their investments in the economy of the Russian Federation), and rent which reflects a balance on income receivable and payable from leasing for the use of land and natural resources.

1.3. Secondary income represents a balance on current transfers between residents and non-residents.

A transfer is an economic transaction resulting in provision without a quid pro quo by one institutional unit to another of a commodity, service, asset or ownership rights without any counterparts thereof being received in return as an equivalent. Current transfers are those that augment the disposable income and potential consumption power of a recipient country's residents, and reduce the disposable income and potential consumption power of a donor country's residents.

2. Capital account includes a balance on the acquisition/disposal of non-produced non-financial assets, as well as a balance on transactions in capital transfers between Russian Federation residents and non-residents.

Acquisition/disposal of non-produced non-financial assets reflects the acquisition and disposal of assets that are not the result of production (land and its subsoil) and (or) assets of intangible nature such as patents, copyrights, trademarks, franchising rights, etc.

Capital transfers represent large-amount transactions of irregular nature, e.g. debt forgiveness, investment grants, certain types of taxes, large-value gifts, payment and receiving of inheritance, etc.

Net lending (+) / net borrowing (-) (balance on current and capital accounts) represents the sum of current account balance and capital account balance.

3. Net lending (+) / net borrowing (-) (balance on financial account) is the residual balance on transactions with financial liabilities and assets between Russian Federation residents and non-residents. The outcome is calculated as the difference between the aggregates of net acquisition of financial assets and net incurrence of liabilities.

Net acquisition of financial assets ('+' — increase, '-' — decrease) represents the difference between an increase of residents' foreign assets and a decrease thereof resulting from financial transactions.

Net incurrence of liabilities ('+' — increase, '-' — decrease) represents the difference between an increase of residents' foreign liabilities and a decrease thereof resulting from financial transactions.

Financial assets and liabilities are classified by functional category: direct investment, portfolio investment, financial derivatives, other investment, and international reserves.

Direct investment is a category of foreign investment, which is made by a resident institutional unit of one economy with the purpose to exercise control or acquire a lasting influence on the management of an enterprise located in another economy. Direct investment relationship arises when a direct investor owns directly or indirectly equity assuring him/her 10% or more of the votes in managing the direct investment enterprise. Direct investment also includes transactions of a direct investment enterprise to acquire equity and debt instruments of its direct investor (reverse investment) and transactions between sister enterprises. Sister enterprises are those that are under the control and influence of the same direct or indirect investor, but do not have any control or influence with respect to each other.

Direct investment is accounted for in the form of equity (listed and unlisted stocks, shares, units, real estate), reinvested earnings and debt instruments (securities, loans, other debt instruments), excluding transactions with debt instruments between related financial intermediaries in the same direct investment relationship.

Portfolio investment is a category of foreign investment in negotiable debt securities and equity, excluding those that are included under direct investment and reserve assets.

Loans, cash currency and deposits include lending and borrowing transactions, transactions between residents and non-residents with cash foreign currency, transactions in current accounts (including interbank accounts) and transactions with deposits.

4. Net errors and omissions mean a statistical discrepancy, which is derived residually as net lending / net borrowing of the financial account minus the corresponding item from the current and capital accounts.

in Domestic and Foreign Currencies by Maturity

General Provisions

Definition and basic characteristics of external debt (methodological principles, information sources, information on data dissemination, etc.) set out in the comments to table 1.4 are applicable to the contents of this table.

The table's structure suggests the following sectors as the main classification groupings:

Table 1.4
External Debt of the Russian Federation
by Maturity and Financial Instruments

General Provisions

External debt (according to international methodology) as of the reporting date represents an outstanding amount of actual current, and not contingent, liabilities of residents of the Russian Federation to nonresidents which requires payment(s) of principal and (or) interest at some point(s) in the future.

Information on the external debt of the economy is very important for analyzing its sustainability to external shocks.

Methodological and conceptual basis for external debt statistics is set out in the joint document of a group of international organizations *External Debt Statistics: A Guide for Compilers and Users*, 2013 and also in the sixth edition of the IMF's *Balance of Payments and International Investment Position Manual (BPM6)*.

The key characteristic of debt is the obligation of a debtor to make payment of principal and (or) interest. Therefore, external debt does not include guarantees, open lines of credit, and other contingent liabilities, financial derivatives, and equity instruments as well. Notable exceptions are preferred shares owned by non-residents, which are classified as an external debt component and are included as debt securities.

External debt data under the international methodology cover the indebtedness of all sectors of the economy of the Russian Federation to non-residents, irrespective of the currency of the debt's denomination.

The table's structure suggests the following institutional sectors as the main classification groupings:

- General government;
- Central bank and banks (excluding debt liabilities to direct investors and direct investment enterprises);
- Other sectors (excluding debt liabilities to direct investors and direct investment enterprises).

Debt liabilities to direct investors and direct investment enterprises of *Banks* and *Other sectors* are categorized separately.

Further level of detailing external debt is achieved by breaking it down by maturity as short-term (with original maturity of one year or less) and long-term (with original maturity exceeding one year).

Then data are classified by type of debt instruments (debt securities, loans, trade credits, current accounts and deposits, other debt liabilities).

Information sources include official statistics and administrative data from Russia's Ministry of Finance, FCS of Russia, other ministries and agencies, local governments; reporting from credit institutions, non-credit financial corporations, depositories; primary statistical data from non-financial organizations; data of international financial organizations; and administrative data (and estimates) of the Bank of Russia.

Data for previous reporting dates are revised mainly due to the following reasons: updating of reports for previous periods,

emergence of new information sources, methodological improvements and (or) changes in the methods of compilation of certain aggregates as well as reclassification of financial instruments (aggregates).

External debt statistics of the Russian Federation are available on the Bank of Russia website.

Individual Indicators Highlights

This category includes external debt liabilities of the Bank of Russia and credit institutions (except non-bank credit institutions which are covered within *Other sectors*) and of the State Development Corporation VEB.RF (for the part of its commercial activity) to non-residents. External indebtedness under state credits, which is maintained on the books of the State Development Corporation VEB.RF due to its fulfilment of the functions of the official agent of the Government of the Russian Federation, is included in the liabilities of the general government.

Debt securities represent indebtedness to non-residents on debt securities issued by banks. Securities are recorded at fair value.

Loans, currency and deposits include data on the Bank of Russia's and banks' indebtedness to non-residents under securities' repurchase agreements conducted without change of ownership (direct repo). The aggregate also includes banks' indebtedness to non-residents on current accounts, short- and long-term deposits, other borrowed funds drawn from non-resident banks and the Bank of Russia's indebtedness to non-residents on current accounts, and also the Bank of Russia's estimate of non-residents' cumulative holdings of cash Russian rubles (commentary to compilation of this component is available on the Bank of Russia website under directory Statistics. IMF Special Data Dissemination Standard. Metadata).

Other liabilities represent banks' and the central bank's indebtedness to non-residents on declared dividends payable on common and preferred shares, which are classified as portfolio investment, and indebtedness which originated as a result of a transfer of claims by a resident to a non-resident, and liabilities of the Bank of Russia which have accumulated in the course of SDR allocations to the Russian Federation.

Other sectors (excluding debt liabilities to direct investors and direct investment enterprises). This category contains data

on external funds' drawings with detailed liabilities of other financial corporations (excluding banks) and liabilities of non-financial corporations, households and NPISHs.

Debt securities represent indebtedness to non-residents on debt securities issued by non-financial corporations and other financial corporations (excluding banks). Debt securities are recorded at face value. They include bonds, notes, non-voting preferred stocks which do not give the right to participate in the distribution of the residual value of an enterprise at its liquidation, and also mortgage claims on individuals owned by non-residents.

Loans and deposits include indebtedness under credits received from non-residents, including under direct repos, non-residents' current accounts with non-bank credit institutions, and financial leases.

Debt liabilities to direct investors and to direct investment enterprises. The item includes debt liabilities vis-à-vis non-residents associated with banks, other financial corporations (excluding banks) and non-financial corporations within the framework of direct investment relationship, and also indebtedness on declared dividends payable to foreign direct investors.

Table 1.5
International Investment Position
of the Russian Federation. Main Components

General Provisions

International investment position is a statistical statement that shows at a point in time the value of financial assets of residents of the Russian Federation representing claims on non-residents and gold bullion held as reserve assets, and of liabilities to non-residents of the residents of the Russian Federation. The difference between external financial assets and liabilities is the net investment position, which may be positive — indicating that the Russian Federation is a net creditor to the rest of the world — or negative — indicating that the Russian Federation is a net borrower.

Information presented in the international investment position is very important for the analysis of the economic situation of the Russian Federation.

International investment position is compiled and disseminated quarterly. Methodological basis for compilation of the components of the table is set out in the sixth edition of the IMF's *Balance of Payments and International Investment Position Manual (BPM6)*.

Information sources include reports from Russia's Ministry of Finance, Federal Customs Service, other ministries and agencies, international financial organizations, local governments, credit institutions, noncredit financial corporations, nonfinancial corporations, partner countries' data, as well as own data and estimation system of the Bank of Russia.

International investment position data for previous periods are subject to revision, mainly due to the following reasons: changes in the reported data, availability of data from new sources of information, improvements of methodology and (or) compilation techniques of certain components, reclassification of instruments (indicators).

International investment position statistics of the Russian Federation are available on the Bank of Russia website.

Individual Indicators Highlights

Financial assets and liabilities of residents of the Russian Federation are the major classification groupings presented **on the left of the table**.

Further breakdown of assets and liabilities is made as follows:
— by functional category direct: investment, portfolio investment, financial derivatives, other investment, international reserves (reserve assets);

- by financial instrument: equity and investment fund shares, debt securities, loans, cash currency and deposits, etc.

Data on the value of external assets and liabilities of Russian residents as of the date of the reporting period are presented **on the top of the table** as follows.

Special Valuation Cases

External assets and liabilities are valued primarily at market prices.

Balances on debt securities' stocks including securities issued by the general government sector are valued taking into account the accrued coupon interest.

Data on accrued balances under loans, including trade credits, are reflected at amortized values.

Monetary gold is valued at the current price quotations set by the Bank of Russia.

Table 1.6
Merchandise Trade of the Russian Federation
(per Balance of Payments Methodology)

General Provisions

The table includes monthly data on the merchandise trade of the Russian Federation (according to the balance of payments methodology) broken down by the CIS country and non-CIS country before 2021. In 2022, the publication of data by the group of countries was suspended. The information is published in millions of US dollars.

Data provided in the table "Merchandise Trade of the Russian Federation" are included in the current account of the balance of payments and are compiled in accordance with the sixth edition of the International Monetary Fund's Balance of Payments and International Investment Position Manual (IMF's BPM6 methodology).

The sources of information are the reporting data regularly received by the Bank of Russia from the FCS of Russia, Rosstat and other ministries and agencies, credit and nonfinancial institutions, partner countries' data and own Bank of Russia's system of estimates.

Data on external merchandise trade are published in the Bank of Russia's weekly publication Bank of Russia Bulletin, and are posted on the Bank of Russia official website.

Individual Indicators Highlights

Exports of goods (per balance of payments methodology) represent movement of (i) goods out of the customs territory of the Russian Federation recorded by the Federal Customs Service in accordance with the general trade system, and (ii) goods not registered by the FCS of Russia — namely, goods procured by foreign carriers in Russian ports; goods exported by individuals; goods sold to nonresidents without crossing Russia's customs border including fish and marine products caught in the high seas; other goods whose economic ownership is transferred from residents to nonresidents; net exports of goods under merchanting abroad.

Goods sent for processing under special customs procedures are excluded from exports of goods registered by the FCS of Russia.

Imports of goods (per balance of payments methodology) cover (i) goods brought into the Russian customs territory and recorded by the Federal Customs Service in compliance with the general trade system, and (ii) goods not registered by the FCS of Russia — namely, goods procured by Russian carriers in foreign ports; goods undeclared and/or inadequately declared when imported by legal entities; goods imported by individuals; goods acquired by residents without crossing Russia's customs border; other goods whose economic ownership is transferred from nonresidents to residents.

Goods under processing under special customs procedures are excluded from imports of goods registered by the FCS of Russia.

Merchandise exports and imports are presented in f.o.b. prices (under the f.o.b. terms of goods' sale, the merchandise price includes its cost and expenses on insurance, delivery and

loading of the goods aboard the means of transport at the border of the exporter's country).

Merchandise trade balance is defined as the difference between exports and imports of goods.

Table 1.7
International Reserves of the Russian Federation

General Provisions

A country's **international reserves (reserve assets)** are those external assets that are readily available to and controlled by monetary authorities for meeting balance of payments financing needs, for intervention in foreign exchange markets to affect the currency exchange rate, and for other related purposes (such as maintaining confidence in the currency and the economy, and serving as a basis for foreign borrowing). Reserve assets must be foreign currency assets and assets that actually exist. International reserves should be assets of high quality.

The international reserves of the Russian Federation are highly liquid external assets that are readily available to the Bank of Russia and the Government of the Russian Federation.

Data are compiled on the basis of definitions contained in the sixth edition of the IMF's *Balance of Payments and International Investment Position Manual (BPM6)*, and the IMF's *International Reserves and Foreign Currency Liquidity: Guidelines for a Data Template (2012)*.

Transactions are recorded as of the value date with interest accrued.

Values are converted to US dollars using official exchange rates of foreign currencies in terms of the Russian ruble and gold reference prices set by the Bank of Russia and effective on the reporting date.

Individual Indicators Highlights

The international reserves consist of foreign exchange, SDR holdings, reserve position in the IMF and monetary gold.

Foreign exchange includes foreign currency; balances on nostro corresponding accounts including unallocated gold accounts; deposits with the initial maturity of up to 1 year including gold deposits, with foreign central banks, the Bank for International Settlements (BIS) and nonresident deposit-taking corporations; debt securities issued by nonresidents; loans extended under reverse repo agreements, and other financial claims on nonresidents with the initial maturity of up to 1 year.

Securities received as collateral under reverse repos or under securities' lending agreements (received in exchange for other securities), are not included in international reserves. Securities provided to counterparties under securities' lending transactions are recorded in international reserves, whereas securities that serve as collateral under repurchase agreements are excluded therefrom.

Part of resources of the sovereign funds of the Russian Federation, which is denominated in foreign exchange, deposited with the Bank of Russia and further invested by the Bank of Russia in foreign financial assets, is included in the international reserves of the Russian Federation.

Foreign exchange-denominated claims of the Bank of Russia and the Government of the Russian Federation on residents are not included in the international reserves of the Russian Federation.

Special drawing rights (SDRs) are international reserve assets created by the IMF and allocated to members; included are balances of SDR holdings on the account of the Russian Federation in the Fund's SDR Department.

Reserve position in the IMF is the sum of the reserve tranche position (representing foreign exchange component of the quota of the Russian Federation in the Fund) and the country's claims on the IMF arising from lending under the New Arrangements to Borrow.

Monetary gold is defined as standard gold bars and coins with a purity of at least 995/1,000 held by the Bank of Russia and the Government of the Russian Federation. It comprises gold in vault, en route and in allocated accounts, including those that are held abroad.

Table 1.8
International Reserves and Foreign Currency
Liquidity – Russia

General Provisions

The template recommended by the IMF is meant to provide exhaustive information on the official assets of the Russian Federation in foreign currency and movements of these resources related to different claims and obligations of monetary authorities in foreign currency for the 12 months following the reporting date. In the template data is presented on balance and off-balance sheet transactions of monetary authorities in foreign currency, and supplementary information.

Data is published in terms of millions of US dollars. Foreign exchange assets are converted to US dollars using cross exchange rates of foreign currencies for the US dollar as of the given date.

Blank fields in the tables signify the absence of respective financial instruments as of the reporting date.

Data sources for International Reserves and Foreign Currency Liquidity are: balance sheet and off-balance sheet data of the Bank of Russia, operational reports of the Bank of Russia and the Ministry of Finance of the Russian Federation.

Individual Indicators Highlights

Section I **Official Reserves Assets and Other Foreign Currency Assets** provides information on the structure of Russia's international reserves as well as data on the non-reserve foreign exchange assets of monetary authorities. Comprehensive description of international reserves is given in the methodological comments to the table 'International Reserves of the Russian Federation'. Other foreign currency liquidity represents assets of the Bank of Russia and the Ministry of Finance of the Russian Federation that do not meet the requirements for international reserves. Unlike reserve assets, non-reserve assets do not need to be external assets. They can be claims on residents.

Section II **Predetermined Short-term Net Drains on Foreign Currency Assets** describes the main directions of expenditure of foreign currency and sources of inflows of foreign currency.

Section III **Contingent Short-term Net Drains on Foreign Currency Assets** involves information on forthcoming changes in foreign exchange reserves of the Bank of Russia and Ministry of Finance of the Russian Federation as a result of exercising contingent assets and liabilities with remaining maturities of one year and transactions in options.

Reference data in Section IV **Memorandum Items** provides an explanation of the indicators recorded in Section I, reserves' currency composition by groups of currencies being disclosed.

Table 1.9
International Reserves Adequacy
(International Reserves in Months of Import)

General Provisions

Reserves adequacy is determined by comparison of the actual amount of the international reserves in months of imports of goods and services and the international benchmark reserves adequacy.

Individual Indicators Highlights

The international benchmark reserves adequacy is equal to three months.

The actual amount of international reserves in months of imports is calculated as the ratio of the amount of international reserves of the Russian Federation at the end of a reporting quarter to the average monthly import of goods and services for the last four quarters.

For example, the actual amount of the international reserves in months of imports for the first quarter of 2016 will be the ratio of the amount of the international reserves of the Russian Federation on 1 April 2016 to the average monthly import of goods and services for the period Q2–Q4 2015 – Q1 2016.

The indicator is disclosed on a quarterly basis no later than four months after the end of the reporting quarter.

Table 1.17
Financial assets and liabilities
of the Households sector

Table 1.18
Transactions with financial assets
of the Households sector

General Provisions

The tables disclose information about balance sheet indicators and transactions with financial assets and liabilities of the Households sector and are part of sectoral balance sheets and financial accounts of the System of National Accounts of the Russian Federation for the Households sector, compiled by the Bank of Russia in accordance with Clause 16.1 of Article 4 of Federal Law No. 86-FZ, dated 10 July 2002, 'On the Central Bank of the Russian Federation (the Bank of Russia)'.

Financial assets and liabilities of households are presented by type of financial instruments, which makes it possible to use this information in the comprehensive analysis of consumer and savings patterns of households, their investment preferences, the composition of household borrowing, as well as the dynamics and structure of financial wealth as part of the overall well-being of households. The published data on financial assets and liabilities of households help improve the consistency of data on the balance of disposable income and expenditure of households, financial accounts, and sectoral balance sheets of the System of National Accounts (SNA).

The methodological basis for the compilation of data on financial assets and liabilities of the Households sector is the System of National Accounts Manual 2008 (hereinafter, SNA-2008).¹

In accordance with SNA-2008, **balance sheet indicators of financial assets and liabilities** contain data on the stock of financial assets and liabilities at a certain point of time. The value of assets at any time changes whenever a transaction is made, prices change, or any other changes occur that influence the volumes of assets and liabilities. Balance sheet indicators of financial assets and liabilities denominated in foreign currency are translated into the national currency at the exchange rate as of the last business days of the reporting period.

A **transaction** is an economic flow that is the interaction between institutional units by mutual agreement. Transactions with financial assets and liabilities denominated in foreign currency are converted into domestic currency at the average exchange rate for the period in which the transaction is made. As a rule, the valuation of transactions is based on market prices. Where this is impossible for lack of information, indirect methods of transaction valuation are used. Households' transactions with unlisted shares and other equity stakes in non-residents are measured in accordance with the methodological approaches of the sixth edition of the Balance of Payments and International Investment Position Manual² (hereinafter, BPM6) and correspond to the balance of payments data of the Russian Federation.

In the absence of sources of information on transactions and balance sheet indicators of financial assets and liabilities of the Households sector, the indicators are calculated using the residual method based on known total amounts across all sectors of the economy.

The definition of the **Households sector** corresponds to Appendix B 'Classification of institutional sectors of the economy' to the All-Russian Classification of Forms of Incorporation

¹ System of National Accounts 2008 (European Commission, United Nations, Organization for Economic Cooperation and Development, International Monetary Fund, World Bank).

² Balance of Payments and International Investment Position Manual, Sixth Edition (BPM6), International Monetary Fund, 2009.

OK 028-2012 (approved by Rosstandart Order No. 505-st, dated 16 October 2012).

An **institutional unit** is an economic entity that has the capacity, in its own right, to own assets, incur liabilities, engage in economic activity and transactions with other entities (SNA-2008: 4.2). Institutional units are grouped by sector and subsector.

The Households sector consists of institutional units comprising an individual or a group of individuals, including individual entrepreneurs.

The methodology for deriving the indicators of financial assets and liabilities of the Households sector may be updated as methods of and approaches to calculating indicators are improved as part of the efforts to harmonize SNA indicators with other areas of macroeconomic statistics.

The main source of information for compiling the 'Financial Assets and Liabilities of the Households Sector' is the monthly consolidated balance sheet of operating credit institutions (excluding branches of Russian credit institutions abroad) and credit institutions with revoked licenses — reporting form 0409101 'Trial Balance Sheet on the Accounting Records of a Credit Institution'. Other sources of information are: the balance sheet of the State Development Corporation VEB.RF; reporting form 0420867 'Report on Performing Operations, Types and Cost of Securities Recorded in Accordance With Contracts for Providing Services of a Specialized Depository to a Management Company Engaged in Trust Management of Pension Savings that the Pension and Social Insurance Fund of the Russian Federation Transferred to it, and on Transactions That the Said Management Company Conducts Using Pension Savings'; reporting form 0409711 'Report on Securities and Digital Rights'; reporting form 0409303 'Information on Loans Granted to Legal Entities'; reporting form 0409110 'Details on Individual Indicators of a Credit Institution's Activity'; trading data of the Moscow Exchange; data from the register of issues (additional issues) of credit institutions' securities registered and cancelled by the Bank of Russia, as well as issues (additional issues) of securities earlier suspended and then renewed.¹
